   a. **Partly met** – all pages except log in page were optimized
10. An appropriate login page made in order to secure data access
    a. **Met** – in order to access data, username and password are required

Overall, the main features of project work as expected, and only one feature, displaying average grade, is not available.

Recommendations

Ms. Magdalena was overall happy with the system and now feels that storing remarks will be easier and her data will be more organized. She however, proposed some recommendations:

Color boxes for grades

She would like to see grades represented by color rather than words. This would allow her to analyze overall progress of the student quicker.

Display of current unit and subtopic in top navigation bar

Ms. Magdalena would also like to see what unit and what subtopic is currently being studied. This feature would help her with organization.

Search for information

In the future, Ms. Magdalena would like to search for information using keywords.

Sorted tables

After a little discussion, Ms. Magdalena also needs buttons to sort tables on view pages.

Word Count: 408
